

NEW Esteem[®] ANT BAIT

Long-Lasting Fire Ant Control in Pastures

Protect livestock, equipment, workers and family from fire ant stings with Esteem[®] Ant Bait, an effective, long-term fire ant control solution.

- Granular bait with long-lasting control of fire ants in pasture and rangeland
- Ranch-friendly with no grazing or withdrawal restrictions, quick re-entry and no adverse impact on the environment
- Can be used on more than 100 different crops and in and around farms

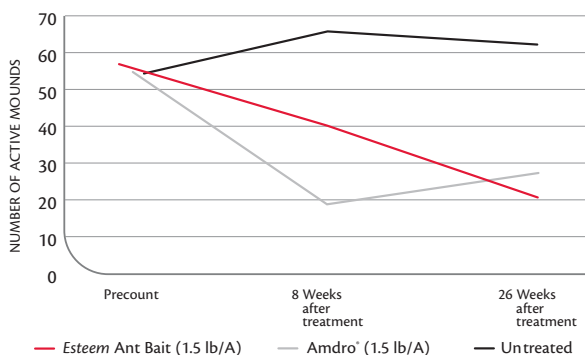

An attractive bait to fire ants and other protein-feeding ants, worker ants take it back to the nest of both single and multiple queen mounds to kill the queen and the developing ant colony. *Esteem* may appear slow-acting as it kills the entire colony by disrupting the queen's ability to lay fertile eggs. The worker ants are not replaced, and the mound dies, resulting in long-lasting control.

Use Tips

- Apply *Esteem* when fire ants are actively foraging—when temperatures are between 65 and 80 degrees and no rain is expected within six hours.
- Apply 1.5 lbs. per acre. Broadcast is easier to apply and more effective than individual mound treatments, controlling both visible and hidden mounds. You may also make individual mound treatments.
- Spring and/or fall are typically the best times of year to apply.

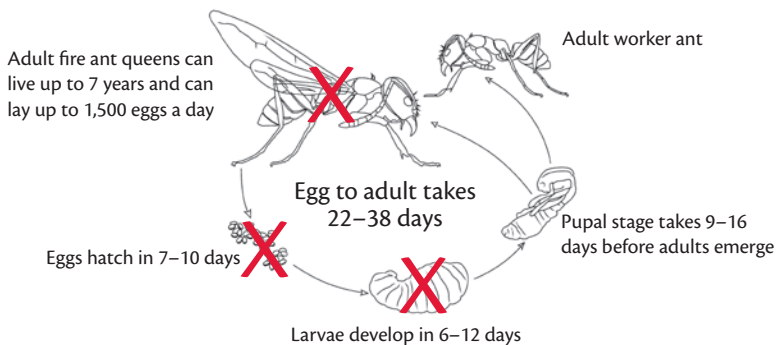

No grazing restrictions.

Esteem® Provides Long-Lasting Red Imported Fire Ant Control

How *Esteem* Works

Once ingested by the queen, *Esteem* disrupts her ability to lay fertile eggs. In addition, existing larvae do not become adults. The result: worker ants are not replaced, and the entire colony dies.
